

Prototyping Report

Date Selection (Calendar Popup)

Description:

This screen allows users to select their check-in and check-out dates using a visual calendar. Users click the date input fields, which trigger a popup calendar where they can choose specific dates. Once selected, the calendar closes and displays the chosen dates in the input fields. This feature simplifies the booking process by making date selection quick, intuitive, and error-proof.

Related Requirement: FR-3 The system shall allow users to select valid check-in and check-out dates using a calendar component.

Description:

This screen collects payment information before confirming a hotel booking. It includes form fields for entering credit or debit card details, cardholder name, expiration date, CVV/CVC code, and optional promo codes. Users must agree to terms and conditions before proceeding. This page represents the final step in the booking process and is critical for validating and confirming payment.

Related Requirement: FR-5 The system shall securely collect payment details and validate inputs before booking is finalized.
